

# Poverty in the United States: 2023

---

## Current Population Reports

By Emily A. Shrider

Issued September 2024

P60-283

## Acknowledgments

**Emily A. Shrider** prepared this report under the direction of **Brian Glassman**, chief of the Poverty Statistics Branch. **John Creamer** led the production and analysis of the Supplemental Poverty Measure. **Liana E. Fox**, assistant division chief for Economic Characteristics in the Social, Economic, and Housing Statistics Division, provided overall direction.

**Preeti Vaghela**, with the assistance of **Kerry Akiyama**, **Andrew Blocher**, **Matthew Dearstyne**, **Lorelei De Vos**, **Richard Lee**, and **Aboubakari Petoni**, under the supervision of **Karen Bradwell**, all of the Demographic Systems Division, and **Roselyn Rosal Tineo** of the Demographic Programs Directorate—Survey Operations (ADDP-SO), processed the 2024 Current Population Survey Annual Social and Economic Supplement (CPS ASEC) file.

**Adam W. Reilly**, with the assistance of **Kirk E. Davis**, **Raymond E. Dowdy**, **Lan N. Huynh**, **Marguerite McDaniel**, and **Chandararith R. Phe**, programmed and produced the historical, detailed, and publication tables under the direction of **Hung X. Pham**, chief of the Tabulation and Applications Branch, Demographic Surveys Division.

**Alfred G. Meier** and **Jana Hatch**, under the supervision of **David V. Hornick**, all of the Demographic Statistical Methods Division, conducted statistical review.

**Tim Marshall**, **Roselyn Rosal Tineo**, and **Roberto Marrero Cases**, all of ADDP-SO, provided overall direction for survey implementation. **Charlie Carter** and **Johanna Rupp**, both of the Information Technology Directorate, prepared and programmed the computer-assisted interviewing instrument used to conduct the CPS ASEC.

Additional people within the U.S. Census Bureau also made significant contributions to the preparation of the report. **Kalee Burns**, **Adrienne DiTommaso**, **Katherine Engel**, **Christin Landivar**, **Matthew Marlay**, **Ani Silwal**, and **Danielle Wilson** reviewed the contents. **Katie Shantz** prepared the tax model.

**Christine Geter**, **Faye Brock**, **Andrew Quach**, **Stephen Gibson**, and **Stacey Barber** provided publication management, graphic design and composition, editorial review, and 508 compliancy for print and electronic media under the direction of **Corey Beasley**, chief of the Graphic and Editorial Services Branch, Public Information Office.

The authors also would like to thank the Census Bureau **field representatives** and **telephone interviewers** who conducted the interviews that provide the data in this report. Without their dedication, the preparation of this report or any report from the Current Population Survey would be impossible.

# Poverty in the United States: 2023

## INTRODUCTION

The U.S. Census Bureau produces annual poverty estimates to measure the economic well-being of households, families, and individuals in the United States. This report provides estimates of two measures of poverty: the official poverty measure and the Supplemental Poverty Measure (SPM). The official poverty measure, produced since the 1960s, defines poverty by comparing pretax money income to a national poverty threshold adjusted by family composition.<sup>1, 2</sup> The official poverty measure is used as an input to determine eligibility for several government programs and has been used as a benchmark of economic well-being since its adoption.

The SPM, produced in collaboration with the Bureau of Labor Statistics (BLS), extends the official poverty measure by accounting for several government programs that are designed to assist low-income families but are not included in official poverty measure calculations. The SPM also accounts for geographic variation in housing expenses when calculating poverty thresholds and includes federal and state taxes, work expenses, and medical expenses. The SPM has been released annually since 2011, with estimates going back to 2009. It does not replace the official poverty measure, but rather provides a different metric of economic well-being that includes resources

from government programs and tax credits to low-income families.\*

The estimates in this report are based on data collected in the 2024 and earlier Current Population Survey Annual Social and Economic Supplements (CPS ASEC) conducted by the Census Bureau. This report is released alongside two other reports focused on household income and health insurance coverage in the United States: “Income in the United States: 2023” and “Health Insurance in the United States: 2023.”<sup>3</sup>

## Highlights

### Official Poverty Measure

- In 2023, the official poverty rate fell 0.4 percentage points to 11.1 percent. There were 36.8 million people in poverty in 2023, not statistically different from 2022 (Figure 1 and Table A-1).<sup>4</sup>
- Between 2022 and 2023, the official poverty rate decreased for White and non-Hispanic White individuals; women; 18- to 64-year-olds; unrelated individuals; all workers; less than

---

\* The Census Bureau reviewed these data and associated products for unauthorized disclosure of confidential information and approved the disclosure avoidance practices applied to this release (Data Management System [DMS] number: P-7534374, Disclosure Review Board [DRB] approval number: CBDRB-FY24-0435). To further protect respondent privacy, all estimates in this report have undergone additional rounding. As a result, this year's estimates may differ from previous publications and details may not sum to totals. All comparative statements have undergone statistical testing and are statistically significant at the 90 percent confidence level unless otherwise noted.

full-time, year-round workers; and those with some college. The only group to experience a statistically significant increase in their official poverty rate was the Two or More Races population (Figure 2 and Tables A-1 and A-2).

### The Supplemental Poverty Measure (SPM)

- The SPM rate in 2023 was 12.9 percent, an increase of 0.5 percentage points from 2022 (Figure 4 and Table B-3).
- The SPM child poverty rate increased 1.3 percentage points to 13.7 percent in 2023. The SPM rates for 18- to 64-year-olds and people 65 years and older were not statistically different from 2022 (Figure 4 and Table B-3).<sup>5</sup>
- SPM rates increased between 2022 and 2023 for Asian and Hispanic (any race) individuals and for those reporting Two or More Races. SPM rates did not change significantly for White, non-Hispanic White, Black, or American Indian and Alaska Native individuals (Figure 4 and Table B-3).<sup>6</sup>
- Social Security continues to be the largest antipoverty program, moving 27.6 million individuals out of SPM poverty in 2023 (Figure 10 and Table B-7).

### Differences in Poverty Measures

- The share of the population with resources below 50 percent of their poverty threshold was higher using the official poverty measure with a consistent

universe (5.2 percent) than when using the SPM (4.4 percent) (Figure 9 and Table B-5).<sup>7</sup>

- In 2023, most of the groups discussed in this report had higher SPM rates than official poverty rates with a consistent universe (Figure 7 and Table B-4).

### Background

The Census Bureau has produced poverty estimates since the 1960s. Following the Office of Management and Budget’s (OMB) Statistical Policy Directive 14, the official poverty measure classifies families and individuals as in poverty if their pretax money income falls below a threshold adjusted by family composition. Poverty thresholds are adjusted annually for inflation using the Consumer Price Index for All Urban Consumers (CPI-U). The official

poverty measure can be used to evaluate economic well-being back to 1959. Appendix A provides more information on the official poverty measure.

The SPM was developed after years of research and analysis. It is based on the recommendations of the Interagency Technical Working Group (ITWG) on Developing a Supplemental Poverty Measure and the 1995 report of the National Academy of Sciences Panel on Poverty and Family Assistance. The SPM complements the official poverty measure by expanding the definition of resources to include noncash benefits while deducting key expenses. The SPM also uses poverty thresholds that account for a wider set of needs and geographic variation than the official poverty thresholds.<sup>8</sup>

Additionally, it accounts for housing tenure by using different thresholds for renters, owners with a mortgage, and those who have substantially lower housing costs, either because they do not pay rent or are owners without a mortgage.

In addition to the differences in resources and thresholds, the official poverty measure and the SPM use different measurement units and universes. The official poverty measure assumes that only individuals related by birth, marriage, and adoption (i.e., census-defined families) share resources. This resource-sharing unit is used to sum resources and determine the appropriate poverty threshold. In comparison, the SPM expands the resource-sharing unit to also include family members, unmarried

### DIFFERENCES IN POVERTY MEASURES

	Official Poverty Measure	Supplemental Poverty Measure
Measurement units	Families (individuals related by birth, marriage, or adoption) or unrelated individuals.	Resource units (official family definition plus any coresident unrelated children, foster children, and unmarried partners and their relatives) or unrelated individuals (who are not otherwise included in the family definition).
Poverty threshold	Three times the cost of a minimum food diet in 1963.	Based on recent expenditures for food, clothing, shelter, utilities, telephone, and internet (FCSUti).
Threshold adjustments	Vary by family size, composition, and age of householder.	Vary by family size, composition, and housing tenure with geographic adjustments for differences in housing costs.
Updating thresholds	Consumer Price Index for All Urban Consumers: all items.	Most recent 5-year moving average of expenditures on FCSUti, lagged 1 year.
Resource measure	Gross pretax cash income.	Cash income, plus noncash benefits that resource units can use to meet their FCSUti needs, minus taxes (or plus tax credits), work expenses, medical expenses, and child support paid to another household.
Universe	Civilian noninstitutionalized population, excluding unrelated individuals under the age of 15 for whom poverty status cannot be determined.	Official poverty measure universe, plus unrelated individuals under the age of 15.
Time series	1959–present.	2009–present.

partners and their relatives, coresident unrelated children under the age of 15, and foster children under the age of 22. Because of these differences, official poverty measure estimates are reported for families, while SPM estimates are reported for resource units. Both measures also provide estimates for unrelated individuals.<sup>9</sup>

The difference in measurement unit also leads to a difference in universe: the SPM includes unrelated children under the age of 15, while the official poverty measure does not. To account for this difference, this report uses the designation “official\*” when directly comparing the official and SPM poverty measures. Estimates of official\* poverty add unrelated individuals

under the age of 15 to the official poverty universe. These individuals are given the official poverty status of the household reference person.

The SPM does not replace the official poverty measure, nor is it designed to be used for program eligibility or funding distribution. The main differences in the two measures are summarized in the “Differences in Poverty Measures” table. Updates to the SPM for 2023 can be found in Appendix B. Additional details are available in the SPM technical documentation at <[https://www2.census.gov/programs-surveys/supplemental-poverty-measure/datasets/spm/spm\\_techdoc.pdf](https://www2.census.gov/programs-surveys/supplemental-poverty-measure/datasets/spm/spm_techdoc.pdf)>. Comparisons over time should be made with caution due to changes in survey design, sampling, and instrument

changes, as well as data processing and methodological improvements.<sup>10</sup>

### OFFICIAL POVERTY BY SELECTED CHARACTERISTICS

In 2023, the official poverty rate fell 0.4 percentage points to 11.1 percent, the first statistically significant change in the official poverty rate since 2020 (Figure 1 and Table A-1). There were 36.8 million people in poverty in 2023, not statistically different from 2022. Of the demographic groups presented in Figure 2, only one—individuals reporting Two or More Races—experienced an increase in poverty in 2023. Official poverty rates for the other demographic groups either decreased or were

Figure 1.  
**Number in Poverty and Poverty Rate Using the Official Poverty Measure: 1959 to 2023**

Note: Population as of March of the following year. The data for 2017 and beyond reflect the implementation of an updated processing system. The data for 2013 and beyond reflect the implementation of the redesigned income questions. Refer to Table A-3 for historical footnotes. The data points are placed at the midpoints of the respective years. Information on recessions is available in Appendix C. Information on confidentially protection, sampling error, nonsampling error, and definitions is available at <<https://www2.census.gov/programs-surveys/cps/techdocs/cpsmar24.pdf>>. Source: U.S. Census Bureau, Current Population Survey, 1960 to 2024 Annual Social and Economic Supplements (CPS ASEC).

---

not statistically different from 2022. Estimates for additional demographic and family groups are available in Tables A-1 and A-2.

### Sex and Age

The official poverty rate for women fell 0.5 percentage points to 11.9 percent in 2023 but remained higher than the rate for men (10.2 percent). The poverty rate for men was not statistically different from 2022 (Figure 2 and Table A-1).

Among the age groups in Figure 2, only 18- to 64-year-olds experienced a significant change in poverty between 2022 and 2023, declining 0.6 percentage points to 10.0 percent in 2023. People under 18 years old had a higher poverty rate (15.3 percent) than both 18- to 64-year-olds (10.0 percent) and those 65 years and older (9.7 percent).<sup>11</sup>

### Type of Unit<sup>12</sup>

Official poverty rates did not change significantly for people in families, regardless of family type (Figure 2 and Table A-2). Of people in families, those in married-couple families had the lowest poverty rate (5.2 percent), while those in female-householder families had the highest (23.6 percent).<sup>13</sup>

Poverty rates for unrelated individuals decreased by 0.9 percentage points between 2022 and 2023 to 19.2 percent.

### Race and Hispanic Origin<sup>14, 15</sup>

From 2022 to 2023, only the White, non-Hispanic White, and Two or More Races populations saw significant changes in their official poverty rates. The poverty rate for White individuals declined

by 0.7 percentage points to 9.7 percent, while the rate for non-Hispanic White individuals declined by 0.9 percentage points to 7.7 percent.<sup>16</sup> The poverty rate increased by 2.2 percentage points to 14.4 percent for those reporting Two or More Races (Figure 2 and Table A-1). Poverty rates for Black, Asian, American Indian and Alaska Native, and Hispanic (any race) individuals were not statistically different from 2022.<sup>17</sup>

Of the race and Hispanic origin groups shown in Figure 2 and Table A-1, poverty rates were highest for American Indian and Alaska Native (21.2 percent) and Black individuals (17.9 percent).<sup>18</sup> The poverty rate was lowest for non-Hispanic White individuals (7.7 percent).

Figure 3 shows the composition of the total population by race and Hispanic origin. This figure highlights which groups were overrepresented or underrepresented among the population in poverty by comparing the share of a particular group in poverty to that group's share of the overall population. Groups with a ratio of less than 1.0 were underrepresented in poverty while groups above 1.0 were overrepresented. For example, while non-Hispanic White individuals made up 58.1 percent of the total population, they only made up 40.5 percent of the population classified as poor by the official poverty measure. As shown in the bottom panel of Figure 3, this results in a ratio of 0.7, indicating that non-Hispanic White individuals were underrepresented in the poverty population. Asian individuals were also underrepresented in the poverty population, while Hispanic (any race), Black, Two or

More Races, and American Indian and Alaska Native individuals were overrepresented.<sup>19</sup>

### Educational Attainment<sup>20</sup>

Poverty rates by educational attainment for those 25 years and older are shown in Figure 2. Between 2022 and 2023, the official poverty rate decreased 0.9 percentage points to 8.5 percent for those with some college education (Figure 2 and Table A-1). Poverty rates were not statistically different for the rest of the educational groups. Those without a high school diploma had the highest poverty rate (25.1 percent), while those with at least a bachelor's degree had the lowest rate (4.0 percent).

### Work Experience

From 2022 to 2023, the official poverty rate for all 18- to 64-year-old workers declined by 0.3 percentage points to 4.5 percent. The poverty rate fell 1.1 percentage points for those who worked less than full-time, year-round to 11.7 percent. In 2023, full-time, year-round workers had the lowest poverty rate (1.8 percent), while those who did not work had the highest (29.7 percent). Neither rate was significantly different from 2022.

### THE SUPPLEMENTAL POVERTY MEASURE (SPM)

The official poverty measure provides a consistent definition of poverty over long periods by considering pretax money income alone and using thresholds that are only inflation-adjusted. It does not capture tax policy, noncash assistance, geographic cost-of-living differences, necessary expenses, or changes over time in any of these components.

Figure 2.

**People in Poverty Using the Official Poverty Measure: 2022 to 2023**

\* An asterisk preceding an estimate indicates change is statistically different from zero at the 90 percent confidence level.

<sup>1</sup> Population limited to individuals 25 years and older. In 2023, the overall poverty rate for this group was 9.5 percent.

<sup>2</sup> Population limited to 18- to 64-year-olds. In 2023, the overall poverty rate for this group was 10.0 percent.

Note: Population as of March of the following year. Details may not sum to totals due to rounding. More details available in Tables A-1 and A-2. More information on confidentiality protection, sampling error, nonsampling error, and definitions is available at <<https://www2.census.gov/programs-surveys/cps/techdocs/cpsmar24.pdf>>.

Source: U.S. Census Bureau, Current Population Survey, 2023 and 2024 Annual Social and Economic Supplements (CPS ASEC).

As the SPM demonstrates, these factors can have a significant effect on poverty rates. The rest of this report explores poverty using the SPM. The SPM provides an additional perspective on economic well-being by expanding the definition of official poverty to include noncash benefits, account for income and payroll taxes, subtract other necessary expenses, use a more inclusive resource sharing unit, and account for geographic differences in housing costs.

The remainder of this report uses official<sup>+</sup> when drawing comparisons between the SPM and the official poverty measure. Official<sup>+</sup> denotes the official poverty measure using the same universe as the SPM, which includes unrelated individuals under the age of 15. Using official<sup>+</sup> allows for direct comparisons of the two concepts with the same reference universe.

### SPM by Selected Characteristics

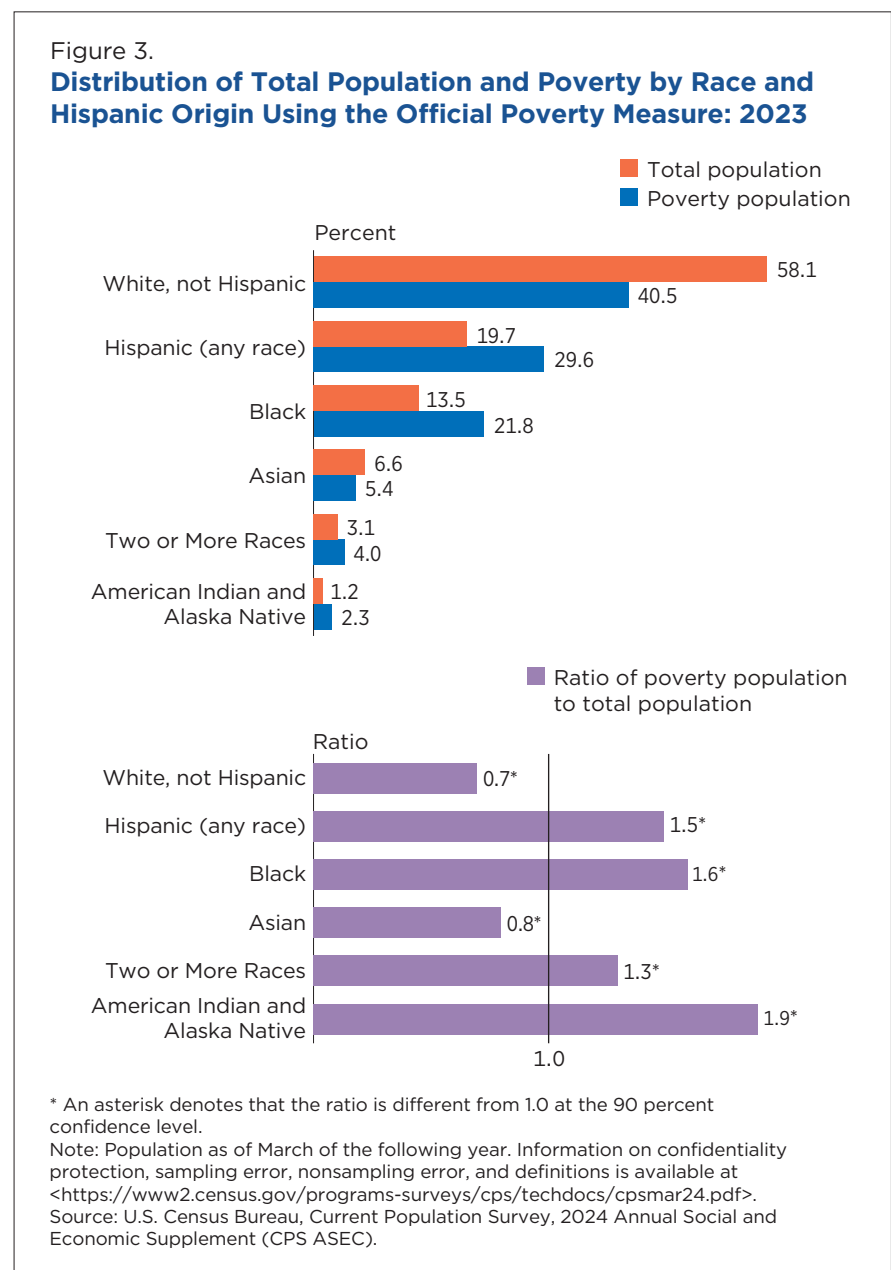

In 2023, the overall SPM rate was 12.9 percent, 0.5 percentage points higher than in 2022. This was the second consecutive annual increase in the SPM rate (Table B-2).

Figure 4 presents annual SPM rates for 2022 and 2023 across a set of demographic characteristics. Estimates for additional demographic groups are available in Table B-3.

### Sex and Age

SPM rates increased by 0.5 percentage points for both men and women in 2023.<sup>21</sup> The SPM rate for women (13.4 percent) was higher than the rate for men (12.4 percent).

In 2023, the SPM rate increased 1.3 percentage points for those under 18 years old to 13.7 percent. SPM rates for both 18- to 64-year-olds

(12.2 percent) and those 65 years and older (14.2 percent) were not statistically different from 2022.<sup>22</sup>

### Housing Tenure

Between 2022 and 2023, SPM rates increased for renters, but were not statistically different for owners, regardless of whether they had a mortgage. The SPM rate for renters increased 1.7 percentage points to 23.9 percent, the highest SPM rate among the three groups. The SPM rate for owners with a mortgage

was 5.7 percent, while the rate for owners with no mortgage was 11.5 percent.

SPM thresholds are adjusted separately for the three housing tenure groups. SPM thresholds for renters increased 8.6 percent between 2022 and 2023, compared to 7.8 percent for owners with a mortgage and 6.8 percent for owners without a mortgage.<sup>23</sup> SPM thresholds for 2022 and 2023 are available in Table B-1.

Figure 4.

**Change in Percentage of People in Poverty Using the Supplemental Poverty Measure: 2022 to 2023**

Z Rounds to zero.

\* An asterisk indicates change is statistically different from zero at the 90 percent confidence level.

<sup>1</sup> Population limited to individuals 25 years and older. In 2023, the overall Supplemental Poverty Measure (SPM) rate for this group was 12.1 percent.

<sup>2</sup> Population limited to 18- to 64-year-olds. In 2023, the overall SPM rate for this group was 12.2 percent.

Note: Population as of March of the following year. Details may not sum to totals due to rounding. More details are available in Table B-3. More information on confidentiality protection, sampling error, nonsampling error, and definitions is available at <https://www2.census.gov/programs-surveys/cps/techdocs/cpsmar24.pdf>.

Source: U.S. Census Bureau, Current Population Survey, 2023 and 2024 Annual Social and Economic Supplements (CPS ASEC).

### Race and Hispanic Origin

SPM rates increased between 2022 and 2023 for three of the race and Hispanic origin groups presented in Figure 4: Asian, Two or More Races, and Hispanic (any race). SPM rates for White, non-Hispanic White, Black, and American Indian and Alaska Native individuals did not change significantly. Non-Hispanic White individuals had the lowest SPM rate (8.8 percent), while American Indian and Alaska Native (19.0 percent) and Hispanic (20.9 percent) individuals had the highest.<sup>24</sup>

Figure 5 shows historical SPM rates for children by race and Hispanic origin (Table B-2).<sup>25</sup> After poverty rates for non-Hispanic White, Black, and Hispanic children fell to historic lows in 2021 due to

pandemic-era policies that targeted families with children, SPM rates for children of all races in the figure began to rise in 2022 as those policies ended.<sup>26</sup> They rose further for Hispanic (any race), Black, and Asian children between 2022 and 2023.<sup>27</sup> The SPM rate for non-Hispanic White children did not change significantly between 2022 and 2023.

### Educational Attainment

Between 2022 and 2023, the SPM rate for those 25 years and older without a high school diploma increased 3.0 percentage points to 30.9 percent (Figure 4 and Table B-3). This is the highest SPM rate among the presented education groups. Those with at least a bachelor's degree had the lowest SPM

rate (5.9 percent). SPM rates for those with a high school diploma (16.1 percent), some college (10.7 percent), and a bachelor's degree or higher did not change significantly from year to year.

### Work Experience

From 2022 to 2023, SPM rates increased for all workers 18 to 64 years old; those who worked full-time, year-round; and those who did not work. The SPM rate for those working less than full-time, year-round (14.7 percent) did not significantly change. Full-time, year-round workers had the lowest SPM rate (4.1 percent), while those who did not work had the highest (31.1 percent). The SPM rate for all 18- to 64-year-old workers was 7.0 percent in 2023.

Figure 5.  
**Child Supplemental Poverty Rates by Race and Hispanic Origin: 2009 to 2023**

Note: Population as of March of the following year. The Supplemental Poverty Measure (SPM) estimates for 2019 and beyond reflect the implementation of revised SPM methodology. More information is available in the SPM technical documentation at [https://www2.census.gov/programs-surveys/supplemental-poverty-measure/datasets/spm/spm\\_techdoc.pdf](https://www2.census.gov/programs-surveys/supplemental-poverty-measure/datasets/spm/spm_techdoc.pdf). The data for 2017 and beyond reflect the implementation of an updated processing system. The data for 2013 and beyond reflect the implementation of the redesigned income questions. Refer to Table B-2 for historical footnotes. The data points are placed at the midpoints of the respective years. Information on recessions is available in Appendix C. More information on confidentiality protection, sampling error, nonsampling error, and definitions is available at <https://www2.census.gov/programs-surveys/cps/techdocs/cpsmar24.pdf>.  
Source: U.S. Census Bureau, Current Population Survey, 2010 to 2024 Annual Social and Economic Supplements (CPS ASEC).

## POVERTY ESTIMATES FOR 2023: OFFICIAL\* AND SPM

Figure 6 presents SPM and official\* estimates from 2009 to 2023.<sup>28</sup> The overall SPM rate (12.9 percent) was 1.8 percentage points higher than the official\* rate (11.1 percent) in 2023 (Table B-4). This is an increase from the 0.9 percentage-point gap between measures in 2022, which is largely due to a difference in how the poverty thresholds are adjusted each year.<sup>29</sup> Between 2022 and 2023, base SPM thresholds—those adjusted for housing tenure but not geographic location or family composition—increased between 6.8 and 8.6 percent, while the official poverty thresholds increased 4.1 percent.<sup>30</sup>

Figure 7 displays the difference in poverty rates between the two poverty measures for the selected

demographic characteristics. SPM rates were higher than official\* rates for most groups in the figure but were lower for children and cohabiting partners. Official\* and SPM rates were not statistically different for the Black, American Indian and Alaska Native, and Two or More Races populations.

Figure 8 shows official\* and SPM rates from 2009 to 2023 by age (Table B-2). In 2023, the SPM rate for children (13.7 percent) was lower than the official\* rate (15.2 percent). The gap between the two measures continued to narrow (down to 1.5 percentage points in 2023) following a 10.1 percentage-point gap in 2021. The large gap in 2021 resulted from the inclusion of pandemic-era tax and noncash benefit program expansions. These are included in the SPM but not the official poverty measure, which

only includes money income. The subsequent narrowing in 2022 was due in part to the expiration of those pandemic-era programs.

The SPM rate was higher than the official\* rate for both adult age groups. The SPM rate for 18- to 64-year-olds was 12.2 percent, while the official\* rate was 10.0 percent. Those 65 years and older had the largest gap between measures (4.4 percentage points), with an SPM rate of 14.2 percent and an official\* rate of 9.7 percent.<sup>31</sup> The larger gap among those 65 years and older was primarily due to differences in the treatment of medical expenses between the two measures—medical expenses are subtracted from resources in the SPM but are not accounted for in the official poverty measure.

Figure 6.  
**Poverty Rates Using the Official\* and Supplemental Poverty Measures: 2009 to 2023**

Note: Official\* includes unrelated individuals under the age of 15. Population as of March of the following year. The Supplemental Poverty Measure (SPM) estimates for 2019 and beyond reflect the implementation of revised SPM methodology. More information is available in the SPM technical documentation at [https://www2.census.gov/programs-surveys/supplemental-poverty-measure/datasets/spm/spm\\_techdoc.pdf](https://www2.census.gov/programs-surveys/supplemental-poverty-measure/datasets/spm/spm_techdoc.pdf). The data for 2017 and beyond reflect the implementation of an updated processing system. The data for 2013 and beyond reflect the implementation of the redesigned income questions. ## DISTRIBUTION OF PEOPLE BY INCOME-TO-POVERTY RATIOS: 2023

The methodological differences between the official poverty measure and the SPM not only result in different poverty rates, but also affect the entire distribution of income-to-poverty ratios. These ratios indicate how close someone's income or resources are to the poverty line by dividing their resources by their poverty

threshold. If the resulting ratio is below 0.5, for example, it indicates that income or resources fall below 50 percent of the poverty threshold; if it were more than 2.0, it would indicate that income or resources were more than twice the poverty threshold. Figure 9 compares the distribution of the SPM and official\* measure's income-to-poverty ratio categories for the total population and major age categories (Table B-5).<sup>32</sup>

A smaller share of the total population had incomes below half of their poverty threshold using the SPM (4.4 percent) than the official\* methodology (5.2 percent). In the middle of the distribution, more individuals had income-to-poverty ratios in the 0.50 to 0.99, 1.00 to 1.99, and 2.00 to 3.99 ratio categories when using the SPM than when using the official\* measure. At the top of the distribution, about twice as many people had incomes 4.00 or more times the

Figure 9.  
**Distribution of People by Income-to-Poverty Ratios and Age: 2023**  
(In percent)

Note: Official\* includes unrelated individuals under the age of 15. Population as of March of the following year. Details may not sum to totals due to rounding. More information on confidentiality protection, sampling error, nonsampling error, and definitions is available at <https://www2.census.gov/programs-surveys/cps/techdocs/cpsmar24.pdf>.  
Source: U.S. Census Bureau, Current Population Survey, 2024 Annual Social and Economic Supplement (CPS ASEC).

poverty threshold using the official\* measure (44.5 percent) than using the SPM (22.5 percent).

These patterns are to be expected. Receiving government assistance and tax credits, which the SPM accounts for but the official\* methodology does not, pulls incomes up at the bottom of the income distribution. Paying out taxes and other necessary expenses—also accounted for in the SPM but not the official\* measure—pulls incomes down from the top of the distribution, reducing the percentage of people with income in the highest category in the SPM.

Considering age, the share of people with income-to-poverty ratios below half their poverty threshold was lower when using the SPM than the official\* measure for children and 18- to 64-year-olds but was higher when using the SPM for those 65 years and older. Many of the noncash benefits included in the SPM are targeted at families with children or provide a larger benefit when children are present, like tax credits and the Supplemental Nutritional Assistance Program (SNAP). As a result, the share of children with resources below 50 percent of their SPM threshold (3.6 percent)

was the lowest of the three age groups, followed by 18- to 64-year-olds (4.4 percent). The share of those 65 and older with resources below 50 percent of their SPM threshold was 5.3 percent in 2023.

### THE EFFECT OF CASH AND NONCASH TRANSFERS, TAXES, AND OTHER NONDISCRETIONARY EXPENSES ON THE SPM

A main contribution of the SPM is that it allows us to estimate how including different resources and expenses affect the number of people in poverty and the poverty rate. Figure 10 (Tables B-6 and

Figure 10.  
**Change in Number of People in Supplemental Poverty After Including Each Element: 2023**  
(In millions)

<sup>1</sup> Refundable tax credits include the Earned Income Tax Credit and the refundable portion of the Child Tax Credit.

<sup>2</sup> Includes only the refundable portion of the Child Tax Credit.

<sup>3</sup> Other noncash benefits include energy and broadband benefits, Special Supplemental Nutrition Program for Women, Infants, and Children (WIC), and school lunch.

<sup>4</sup> Other cash benefits include workers compensation, Temporary Assistance for Needy Families (TANF), and child support received. Note: SNAP is the Supplemental Nutrition Assistance Program; SSI is Supplemental Security Income; FICA is the Federal Insurance Contributions Act. Population as of March of the following year. More details are available in Table B-7. More information on confidentiality protection, sampling error, nonsampling error, and definitions is available at <<https://www2.census.gov/programs-surveys/cps/techdocs/cpsmar24.pdf>>.

---

B-7) shows how adding or subtracting different factors from the resource calculation would affect the number of people in poverty in 2023. Some of the programs in the figure—such as Social Security and unemployment insurance benefits—are included in both the official poverty measure and the SPM. Others—such as refundable tax credits, SNAP, and school lunch benefits—are only included in the SPM. Necessary expenses—such as taxes, medical expenses, and work-related expenses—are also deducted from SPM resources but are not considered in the official poverty measure.<sup>34</sup>

To evaluate the effect of programs that add to resources (e.g., Social Security and cash and noncash transfers), we subtract the value of each component from a unit's resources and recalculate poverty status. In contrast, to evaluate the effect of expenses, we add back the value of each component to a unit's resources. Poverty status changes if subtracting a program benefit decreases an individual's resources below their poverty threshold or if adding an expense takes them above their poverty threshold. These additions and subtractions are done independently and assume no behavioral changes such as shifts in employment status or expenses.

Removing one item from the calculation of SPM resources and recalculating poverty rates shows, for example, that Social Security benefits decreased the SPM rate by 8.3 percentage points (Table B-6), lifting 27.6 million people above the poverty line (Figure 10 and Table B-7). Social Security was the largest antipoverty program in 2023, especially for those 65 years and older. Approximately 70 percent of the people pulled out of poverty by Social Security (19.5

million individuals) fell into that age group.

Of the additions to the SPM resources calculation, refundable tax credits had the second-largest effect, lifting 6.4 million people above the poverty line in 2023, including 3.4 million children. About a third of the individuals pulled above the poverty line by refundable tax credits were pulled above the poverty line by the refundable portion of the federal Child Tax Credit (2.4 million individuals).

The SPM subtracts amounts paid for child support, income and payroll taxes, work-related expenses, and medical expenses from resources, which increases the number and percentage of individuals in poverty.<sup>35</sup> Of the subtractions, medical expenses had the largest effect, pushing 7.4 million individuals into poverty in 2023. This effect varied by age. For those 65 years and older, subtracting medical expenses raised the poverty rate by 3.8 percentage points. The effect was smaller among children (1.9 percentage points) and 18- to 64-year-olds (1.9 percentage points).<sup>36</sup>

## SUMMARY

This report provides estimates of poverty in the United States using both the official poverty measure and the SPM.

In 2023, the official poverty rate fell to 11.1 percent, down from 11.5 percent in 2022. This was the first statistically significant change in the official poverty rate since 2020. Of the demographic groups presented in this report, only those reporting Two or More Races had a higher poverty rate in 2023. Official poverty rates for the other demographic groups either

decreased or were not statistically different from 2022.

The SPM rate increased 0.5 percentage points in 2023 to 12.9 percent. This was the second consecutive year that SPM rates increased. Between 2022 and 2023, SPM rates either increased or did not change significantly for every demographic group in this report.

The results illustrate how using different definitions of poverty affect who is counted as being in poverty. The official poverty measure only considers pretax income and uses national thresholds that are inflation-adjusted, allowing for consistent measurement of poverty over time. This allows us to measure poverty consistently going back to the 1960s. The downside of this approach is that it does not capture changes to tax and transfer programs that can affect family and household resources, nor does it account for geographic differences in cost-of-living.

In contrast, the SPM accounts for income and payroll taxes, tax credits, noncash benefits, and nondiscretionary expenses. It uses geographically adjusted poverty thresholds that are updated by BLS with recent information on food, clothing, shelter, utility, telephone, and internet expenditures. This results in a poverty measure that accounts for current standards of living as well as short-term policy changes in response to current events that operate primarily as noncash benefits or through the tax system.

Together, the two measures provide useful information on economic well-being—historic and current—that is particularly informative during periods of rapid change.

## ENDNOTES

<sup>1</sup> The Office of Management and Budget (OMB) determined the official definition of poverty in Statistical Poverty Directive 14. Appendix A provides more details on how the Census Bureau calculates official poverty and on the definition of money income.

<sup>2</sup> Pretax money income refers to gross income received from a variety of sources like earnings, Social Security, pensions, and disability benefits. It does not include tax credits, like the Earned Income Tax Credit (EITC) or the Child Tax Credit, nor does it include noncash benefits, such as subsidized housing or nutritional assistance programs. More information on how income is measured in the official poverty measure is available in Appendix A.

<sup>3</sup> Gloria Guzman and Melissa Kollar, "Income in the United States: 2023," *Current Population Reports*, P60-282, U.S. Census Bureau, Washington, DC, September 2024, available at <[www.census.gov/library/publications/2024/demo/p60-282.html](http://www.census.gov/library/publications/2024/demo/p60-282.html)>. Katherine Keisler-Starkey and Lisa N. Bunch, "Health Insurance in the United States: 2023," *Current Population Reports*, P60-284, U.S. Census Bureau, Washington, DC, September 2024, available at <[www.census.gov/library/publications/2024/demo/p60-284.html](http://www.census.gov/library/publications/2024/demo/p60-284.html)>.

<sup>4</sup> Because unrelated individuals under the age of 15 are excluded from the official poverty universe, there were 550,400 fewer children in the official poverty universe than in the total civilian noninstitutionalized population and the SPM universe in 2023. More information on this difference is provided later in the report and in the SPM technical documentation available at <[https://www2.census.gov/programs-surveys/supplemental-poverty-measure/datasets/spm/spm\\_techdoc.pdf](https://www2.census.gov/programs-surveys/supplemental-poverty-measure/datasets/spm/spm_techdoc.pdf)>.

<sup>5</sup> SPM rates for children and those 65 years and older were not statistically different in 2023.

<sup>6</sup> In 2023, SPM rates were not statistically different for Black and American Indian and Alaska Native individuals, American Indian and Alaska Native and Hispanic individuals, and Asian individuals and those reporting Two or More Races.

<sup>7</sup> Because the CPS ASEC does not ask income questions for individuals under the age of 15, unrelated individuals under 15 are excluded from the official poverty universe. Official\* includes these individuals for a consistent universe with the SPM. More information can be found in the SPM technical documentation, available at <[https://www2.census.gov/programs-surveys/supplemental-poverty-measure/datasets/spm/spm\\_techdoc.pdf](https://www2.census.gov/programs-surveys/supplemental-poverty-measure/datasets/spm/spm_techdoc.pdf)> and in Liana Fox, "Revising Poverty Assignments of Unrelated Children Under Age 15 in the Supplemental Poverty Measure," SEHSD Working Paper #2017-15, U.S. Census Bureau, Washington, DC, <[www.census.gov/library/working-papers/2017/demo/SEHSD-WP2017-42.html](http://www.census.gov/library/working-papers/2017/demo/SEHSD-WP2017-42.html)>.

<sup>8</sup> Thresholds for the SPM are produced by the BLS Division of Price and Index Number Research. The 2022 and 2023 thresholds are in Table B-1.

<sup>9</sup> Unrelated individuals are people of any age who are not living with any other family members. When calculating family poverty, these individuals are treated as single-person units.

<sup>10</sup> The CPS ASEC is updated periodically to improve data quality. These improvements include changes to survey design, such as sampling and survey instrument changes; changes to data processing, such as weighting and data imputation methods; and changes to how the SPM is constructed. When feasible, the Census Bureau provides data users with resources that allow them to evaluate the impact of these survey changes across years. As a result, two estimates are provided for reference years 2013, 2017, and 2019, which reflect years in which there were major changes to the survey and poverty measure methodology. Given these changes, historical comparisons should be made with caution. In this report, estimates are compared to published estimates for earlier years when the questionnaire and processing system changes did not result in statistically significant differences. When survey changes did have statistically significant effects on income or poverty estimates, comparisons are made by adjusting historical published estimates to approximate the magnitude of these effects. More details on the adjustment used for these comparisons are available at <[www.census.gov/library/stories/2019/09/us-median-household-income-not-significantly-different-from-2017.html](http://www.census.gov/library/stories/2019/09/us-median-household-income-not-significantly-different-from-2017.html)>.

<sup>11</sup> Official poverty rates for 18- to 64-year-olds and those 65 and older were not statistically different in 2023.

<sup>12</sup> A family is a group of two or more people (not necessarily including the householder) related by birth, marriage, or adoption and residing together. A primary family includes the householder and members related by the same categories. All such people (including related subfamily members) are considered as members of one family. To assign thresholds and produce poverty estimates, unrelated individuals are treated as single-person units.

<sup>13</sup> In the report text and figures, families with a female householder with no spouse present are referred to as female-householder families. Families with a male householder with no spouse present are referred to as male-householder families.

<sup>14</sup> Federal surveys give respondents the option of reporting more than one race. Therefore, two basic ways of defining a race group are possible. A group, such as Asian, may be defined as those who reported Asian and no other race (the race-alone or single-race concept) or as those who reported Asian regardless of whether they also reported another race (the race-alone-or-in-combination concept). The body of this report (text and figures) shows data using the first approach (race alone), along with estimates for Two or More Races. The appendix tables show data using both approaches. Primary use of the single-race population does not imply that it is the preferred method of presenting or analyzing data. The Census Bureau uses a variety of approaches. In this report, the terms "White, not Hispanic" and "non-Hispanic White" are used interchangeably and refer to people who are not Hispanic and who reported White and no other race. This report uses

non-Hispanic White as the comparison group for other race and Hispanic origin groups. Since Hispanic individuals may be any race, data in this report for the Hispanic population overlap with data for race groups. Of those who reported only one race, Hispanic origin was reported by 17.1 percent of White householders, 5.8 percent of Black householders, 2.4 percent of Asian householders, and 32.3 percent of American Indian and Alaska Native householders. Data users should exercise caution when interpreting aggregate results for the Hispanic population or for race groups because these populations consist of many distinct groups that differ in socioeconomic characteristics, culture, and nativity. Data on Hispanic origin were first collected in 1972. Data on Asian and Pacific Islander origin and American Indian and Alaska Native origin were first collected in 1987. More information is available at <[www.census.gov/programs-surveys/cps.html](http://www.census.gov/programs-surveys/cps.html)>.

<sup>15</sup> Estimates for the Asian, American Indian and Alaska Native, and Two or More Races populations have large variances. This is a result of small sample sizes and the fact that the CPS ASEC does not use separate population controls for weighting these groups to national totals. The American Community Survey (ACS), based on a much larger sample of the population, is a better source for estimating and identifying changes for small subgroups of the population.

<sup>16</sup> The percentage-point change between 2022 and 2023 was not statistically different for White and non-Hispanic white individuals.

<sup>17</sup> Official poverty rates for White and Asian individuals were not statistically different in 2023.

<sup>18</sup> Official poverty rates for Black and Native American and Alaska Native individuals were not statistically different in 2023.

<sup>19</sup> The poverty-to-total-population ratios for Black and American Indian and Alaska Native individuals were not statistically different in 2023.

<sup>20</sup> Information on educational attainment in the CPS ASEC is available at <[www.census.gov/programs-surveys/cps/technical-documentation/subject-definitions.html](http://www.census.gov/programs-surveys/cps/technical-documentation/subject-definitions.html)>. Those with an associate degree are included in the "some college" category.

<sup>21</sup> The percentage-point change between 2022 and 2023 was not statistically different for males and females.

<sup>22</sup> SPM rates for children and those 65 years and older were not statistically different in 2023.

<sup>23</sup> The year-to-year increase in the SPM thresholds was not statistically different between the three housing tenure groups.

<sup>24</sup> In 2023, SPM rates were not statistically different for Black and American Indian and Alaska Native individuals, American Indian and Alaska Native and Hispanic individuals, and Asian individuals and those reporting Two or More Races.

<sup>25</sup> Historical estimates are not shown separately for American Indian and Alaska Native or Two or More Races children due to small sample sizes with large variances. The ACS, based on a much larger sample of the population, is a better source for estimating and identifying changes for small subgroups of the population.

---

<sup>26</sup> The 2021 SPM rate for Asian children was not statistically different from the rate in 2020.

<sup>27</sup> The SPM rates for Black children and Hispanic children were not statistically different in 2023.

<sup>28</sup> SPM estimates from 1967 to 2012 are available in Liana Fox, Christopher Wimer, Irwin Garfinkel, Neeraj Kaushal, and Jane Waldfogel, "Waging War on Poverty: Poverty Trends Using a Historical Supplemental Poverty Measure," *Journal of Policy Analysis and Management*, Volume 34, Issue 3, 2015, <<https://onlinelibrary.wiley.com/doi/abs/10.1002/pam.21833>>.

<sup>29</sup> The official poverty threshold is annually adjusted using the CPI-U, while the SPM thresholds are based on the 5-year moving average of expenditures for a bundle of goods, lagged by a year.

<sup>30</sup> The year-to-year increases in the three base SPM thresholds were not statistically different from each other. In addition, the increase in the thresholds for owners without a mortgage (6.8 percent) was not statistically different from the increase in the official poverty measure thresholds (4.1 percent).

<sup>31</sup> SPM rates for children and those 65 years and older were not statistically different in 2023, nor were official\* rates for 18- to 64-year-olds and those 65 and older.

<sup>32</sup> Table B-5 provides additional estimates of income-to-poverty ratios by race and ethnicity.

<sup>33</sup> Child support payments received are counted as income in both the official poverty measure and the SPM. Child support paid is only deducted in the SPM.

<sup>34</sup> Median weekly work expenses were \$39.30 for 2023 using the 2023 SIPP. Medical expenses include contributions toward the cost of medical care and health insurance premiums.

<sup>35</sup> The number of people moved out of poverty by accounting for medical expenses was not statistically different for children and 18- to 64-year-olds.

# Appendix A. Estimates of Official Poverty

## HOW OFFICIAL POVERTY IS CALCULATED

Following the Office of Management and Budget’s (OMB) Statistical Policy Directive 14, the U.S. Census Bureau uses a set of dollar value thresholds that vary by family size and composition to determine who is in poverty (available in the table below).

If a family’s total money income is less than the applicable threshold, then that family and every individual in it are considered to be in poverty. The official poverty thresholds are updated annually for inflation using the Consumer Price Index for All Urban Consumers (CPI-U). The official poverty definition uses money income before taxes or tax credits and excludes capital gains and noncash benefits (such as Supplemental Nutrition Assistance Program benefits and housing assistance). The thresholds do not vary geographically.

Example: Consider a five-person family with two children, their mother, their father, and their

great-aunt. This family’s 2023 poverty threshold is \$37,275. Each family member had the following income in 2023:

Mother	\$14,000
Father	\$13,500
Great-aunt	\$11,000
First child	\$0
<u>Second child</u>	<u>\$0</u>
Total:	\$38,500

Since their total family income (\$38,500) was higher than their threshold (\$37,275), this family would not be considered “in poverty.”

The OMB Statistical Policy Directive 14 directed the Census Bureau to consistently update the poverty thresholds each year for cost of living changes. Thresholds in this report series are adjusted using the CPI-U and are compared to current year (unadjusted for inflation) money income. If, alternatively, the Consumer Price Index Retroactive Series for all Urban Consumers All Items (R-CPI-U-RS) index had been used to inflation-adjust poverty

thresholds from previous years, current poverty rates would be lower. This is because the R-CPI-U-RS results in a smaller cost-of-living adjustment over longer periods than the CPI-U.

While the thresholds, in some sense, represent the needs of families, they should be interpreted as a statistical yardstick rather than as a complete description of what people and families need to live. There are other ways to measure a family’s needs; many government assistance programs use different income eligibility cutoffs, while the Supplemental Poverty Measure (SPM) uses a different approach for setting thresholds and defining resources. Additional information on SPM methodology is available in the SPM technical documentation at [https://www2.census.gov/programs-surveys/supplemental-poverty-measure/datasets/spm/spm\\_techdoc.pdf](https://www2.census.gov/programs-surveys/supplemental-poverty-measure/datasets/spm/spm_techdoc.pdf).

For a history of the official poverty measure, refer to “Poverty: The History of the Official Poverty

## Poverty Thresholds by Size of Family and Number of Related Children Under 18 Years Old: 2023

(In dollars)

Size of family unit	Related children under 18 years old								
	None	One	Two	Three	Four	Five	Six	Seven	Eight or more
One person (unrelated individual):									
Under 65 years . . . . .	15,852								
65 years and over . . . . .	14,614								
Two people:									
Householder under 65 years . . . . .	20,404	21,002							
Householder 65 years and over . . . . .	18,418	20,923							
Three people . . . . .	23,834	24,526	24,549						
Four people . . . . .	31,428	31,942	30,900	31,008					
Five people . . . . .	37,901	38,452	37,275	36,363	35,807				
Six people . . . . .	43,593	43,766	42,864	41,999	40,714	39,952			
Seven people . . . . .	50,159	50,472	49,393	48,640	47,238	45,602	43,808		
Eight people . . . . .	56,099	56,594	55,575	54,683	53,416	51,809	50,136	49,710	
Nine people or more . . . . .	67,483	67,810	66,908	66,151	64,908	63,198	61,651	61,268	58,907

Measure,” available at <[www.census.gov/topics/income-poverty/poverty/about/history-of-the-poverty-measure.html](http://www.census.gov/topics/income-poverty/poverty/about/history-of-the-poverty-measure.html)>, or “The Development of the Orshansky Poverty Thresholds and Their Subsequent History as the Official U.S. Poverty Measure” by Gordon M. Fischer, available at <<http://www.census.gov/library/working-papers/1997/demo/fisher-02.html>>.

### Weighted Average Thresholds

Since some data users want a summary of the 48 thresholds to get a general sense of the “poverty line,” the following table provides the weighted average thresholds for 2023. The weighted average thresholds are based on the relative number of unrelated individuals and primary families of each size and composition and are not used in computing poverty estimates.<sup>1</sup>

### Weighted Average Poverty Thresholds: 2023

Size of family unit	Dollars
One person . . . . .	15,480
Two people . . . . .	19,680
Three people . . . . .	24,230
Four people . . . . .	31,200
Five people . . . . .	36,990
Six people . . . . .	41,860
Seven people . . . . .	47,670
Eight people . . . . .	52,850
Nine people or more . . . . .	62,900

Source: U.S. Census Bureau, Current Population Survey, 2024 Annual Social and Economic Supplement (CPS ASEC).

### HOW INCOME IS MEASURED

A family’s money income is used to determine the poverty status of the family and all individuals in it. Money income is calculated for each person 15 years and older in the Current Population Survey Annual Social and Economic Supplement (CPS ASEC) sample. Respondents are asked questions on the amount of money income received in the preceding calendar

year from each of the following sources:

1. Earnings.
2. Unemployment compensation.
3. Workers’ compensation.
4. Social Security.
5. Supplemental Security Income.
6. Public assistance.
7. Veterans’ payments.
8. Survivor benefits.
9. Disability benefits.
10. Pension or retirement income.
11. Interest.
12. Dividends.
13. Rents, royalties, and estates and trusts.
14. Educational assistance.
15. Alimony.
16. Child support.
17. Financial assistance from outside the household.
18. Other income.

Data on income collected in the CPS ASEC cover money income received (exclusive of certain money receipts such as capital gains) before payments for personal income taxes, Social Security, union dues, Medicare deductions, etc. Money income also excludes tax credits such as the Earned Income Tax Credit and the Child Tax Credit. Money income does not reflect that some families receive noncash benefits such as nutritional assistance programs, health benefits, and subsidized housing. In addition, money income does not reflect the fact that noncash benefits often take the form of the use of business transportation and facilities, full or partial payments by businesses for retirement programs, medical and educational expenses, etc.

The income of the household does not include amounts received by people who were members during all or part of the previous year

if these people no longer resided in the household at the time of the interview. However, the CPS ASEC includes income data for people who are current residents but did not reside in the household during the previous year. It should be noted that although the income statistics refer to receipts during the preceding calendar year, the demographic characteristics such as age, labor force status, and household composition are as of the survey date.

Data users should consider these elements when comparing income levels. Moreover, readers should be aware that for many different reasons, many respondents tend to misreport or not report all types of income.<sup>2</sup> Income earned from wages or salaries, the largest component of money income, tends to be more accurately reported and weighted totals are in line with other aggregate benchmarks.<sup>3</sup> Still, estimates in this report are affected by ongoing challenges of nonresponse and misreporting. More details on the impact of nonresponse bias are available in Appendix C.

### ENDNOTES

<sup>1</sup> A primary family is a group of two or more people, one of whom is the householder, related by birth, marriage, or adoption and residing together. All such people (including related subfamily members) are considered members of one family.

<sup>2</sup> For more information about the extent and nature of nonresponse and misreporting, refer to Adam Bee, Joshua Mitchell, Nikolas Mittag, Jonathan Rothbaum, Carl Sanders, Lawrence Schmidt, and Matthew Unrath, “National Experimental Wellbeing Statistics,” SEHSD Working Paper #2023-02, U.S. Census Bureau, Washington, DC, 2023, <[www.census.gov/library/working-papers/2023/demo/SEHSD-WP2023-02.html](http://www.census.gov/library/working-papers/2023/demo/SEHSD-WP2023-02.html)>.

<sup>3</sup> For more details on how income aggregates compare across different surveys, refer to Jonathan L. Rothbaum, “Comparing Income Aggregates: How do the CPS and ACS Match the National Income and Product Accounts, 2007–2012,” SEHSD Working Paper 2015-01, U.S. Census Bureau, Washington, DC, 2015, <[www.census.gov/content/dam/Census/library/working-papers/2015/demo/SEHSD-WP2015-01.pdf](http://www.census.gov/content/dam/Census/library/working-papers/2015/demo/SEHSD-WP2015-01.pdf)>.

\* An asterisk preceding an estimate indicates change is statistically different from zero at the 90 percent confidence level.

Z Rounds to zero.

<sup>1</sup> A margin of error (MOE) is a measure of an estimate's variability. The larger the MOE in relation to the size of the estimate, the less reliable the estimate. This number, when added to and subtracted from the estimate, forms the 90 percent confidence interval. MOEs shown in this table are based on standard errors calculated using replicate weights.

<sup>2</sup> Federal surveys give respondents the option of reporting more than one race. Therefore, two basic ways of defining a race group are possible. A group, such as Asian, may be defined as those who reported Asian and no other race (the race-alone or single-race concept) or as those who reported Asian regardless of whether they also reported another race (the race-alone-or-in-combination concept). This table shows estimates for the race-alone population and the Two or More Races population. The primary use of the single-race population does not imply that it is the preferred method of presenting or analyzing data. The Census Bureau presents data on race in a variety of ways. Estimates for Native Hawaiians and Other Pacific Islanders are not shown separately due to sample size.

<sup>3</sup> Information on metropolitan statistical areas and principal cities is available at <[www.census.gov/programs-surveys/metro-micro/about/glossary.html](http://www.census.gov/programs-surveys/metro-micro/about/glossary.html)>.

<sup>4</sup> The sum of those with and without a disability does not equal the total because disability status is not defined for individuals in the U.S. armed forces.

Note: Details may not sum to totals due to rounding. Estimates may differ from previous publications due to additional rounding implemented to protect respondent privacy.

Footnotes available at end of table.

Table A-3.

**Poverty Status of People by Age, Race, and Hispanic Origin: 1959 to 2023—Con.**

(Populations in thousands. Population as of March of the following year. Information on confidentiality protection, sampling error, nonsampling error, and definitions is available at <<https://www2.census.gov/programs-surveys/cps/techdocs/cpsmar24.pdf>>)

Race, Hispanic origin, and year <sup>1</sup>	All people			Under 18 years			18 to 64 years			65 years and over		
	Total	Below poverty		Total	Below poverty		Total	Below poverty		Total	Below poverty	
		Number	Percent		Number	Percent		Number	Percent		Number	Percent
1979 <sup>19</sup> . . . . .	13,370	2,921	21.8	5,483	1,535	28.0	7,314	1,232	16.8	574	154	26.8
1978 . . . . .	12,080	2,607	21.6	5,012	1,384	27.6	6,527	1,098	16.8	539	125	23.2
1977 . . . . .	12,050	2,700	22.4	5,028	1,422	28.3	6,500	1,164	17.9	518	113	21.9
1976 . . . . .	11,270	2,783	24.7	4,771	1,443	30.2	6,034	1,212	20.1	464	128	27.7
1975 . . . . .	11,120	2,991	26.9	N	N	N	N	N	N	N	137	32.6
1974 <sup>20</sup> . . . . .	11,200	2,575	23.0	N	N	N	N	N	N	N	117	28.9
1973 . . . . .	10,800	2,366	21.9	N	N	N	N	N	N	N	95	24.9

N Not available.

<sup>1</sup> Since 2003, federal surveys have allowed respondents to report more than one race. Therefore, two basic ways of defining a race group are possible. A group, such as Asian, may be defined as those who reported Asian and no other race (the race-alone or single-race concept) or as those who reported Asian regardless of whether they also reported another race (the race-alone-or-in-combination concept). This table shows data using both approaches. Since Hispanic individuals may be any race, data for the Hispanic population overlap with data for race groups. Of those who reported only one race in the 2024 CPS ASEC, Hispanic origin was reported by 17.1 percent of White householders, 5.8 percent of Black householders, 2.4 percent of Asian householders, and 32.3 percent of American Indian and Alaska Native householders. Data users should exercise caution when interpreting aggregate results for the Hispanic population or for race groups because these populations consist of many distinct groups that differ in socioeconomic characteristics, culture, and nativity. Data on Hispanic origin was first collected in 1972. Data on Asian and Pacific Islander origin and American Indian and Alaska Native origin was first collected in 1987. Estimates for Native Hawaiians and Other Pacific Islanders are not shown separately due to sample size.

<sup>2</sup> Implementation of 2020 Census-based population controls.

<sup>3</sup> Estimates reflect the implementation of an updated processing system and should be used to make comparisons to 2018 and subsequent years.

<sup>4</sup> The 2014 CPS ASEC included redesigned questions for income and health insurance coverage. All of the approximately 98,000 addresses were eligible to receive the redesigned set of health insurance coverage questions. The redesigned income questions were implemented to a sub-sample of these 98,000 addresses using a probability split panel design. Approximately 68,000 addresses were eligible to receive a set of income questions similar to those used in the 2013 CPS ASEC and the remaining 30,000 addresses were eligible to receive the redesigned income questions. The source of these 2013 estimates is the portion of the CPS ASEC sample that received the redesigned income questions, approximately 30,000 addresses.

<sup>5</sup> The source of these 2013 estimates is the portion of the CPS ASEC sample that received the income questions consistent with the 2013 CPS ASEC, approximately 68,000 addresses.

<sup>6</sup> Implementation of 2010 Census-based population controls.

<sup>7</sup> Data have been revised to reflect a correction to the weights in the 2005 CPS ASEC.

<sup>8</sup> Implementation of a 28,000-household sample expansion.

<sup>9</sup> Implementation of 2000 Census-based population controls.

<sup>10</sup> Full implementation of 1990 Census-based sample design and metropolitan definitions, 7,000-household sample reduction, and revised editing of responses on race.

<sup>11</sup> Introduction of 1990 Census-based sample design.

<sup>12</sup> Data collection method changed from paper and pencil to computer-assisted interviewing. In addition, the 1994 CPS ASEC was revised to allow for the coding of different income amounts on selected questionnaire items. Limits either increased or decreased in the following categories: earnings limits increased to \$999,999; Social Security limits increased to \$49,999; Supplemental Security Income and public assistance limits increased to \$24,999; veterans' benefits limits increased to \$99,999; child support and alimony limits decreased to \$49,999.

<sup>13</sup> Implementation of 1990 Census-based population controls.

<sup>14</sup> Estimates are revised to correct for nine omitted weights from the original 1992 CPS ASEC. More information is available in "Money Income of Households, Families, and Persons in the United States: 1992," P60-184.

<sup>15</sup> Estimates reflect the implementation of a new CPS ASEC processing system and are also revised to reflect corrections to the files after publication of the 1988 advance report "Money Income and Poverty Status in the United States: 1988," P60-166.

<sup>16</sup> Full implementation of 1980 Census-based sample design.

<sup>17</sup> Implementation of Hispanic population weighting controls and introduction of 1980 Census-based sample design.

<sup>18</sup> Implemented three technical changes to the poverty definition. More information is available in "Characteristics of the Population Below the Poverty Level: 1980," P60-133.

<sup>19</sup> Implementation of 1980 Census-based population controls. Questionnaire expanded to show 27 possible values from 51 possible sources of income.

<sup>20</sup> Implementation of a new CPS ASEC processing system. Questionnaire expanded to ask 11 income questions.

<sup>21</sup> Full implementation of 1970 Census-based sample design.

<sup>22</sup> Introduction of 1970 Census-based sample design and population controls.

<sup>23</sup> Implementation of a new CPS ASEC processing system.

Note: Details may not sum to totals due to rounding. Estimates may differ from previous publications due to additional rounding implemented to protect respondent privacy.

---

# Appendix B. The Supplemental Poverty Measure

The Supplemental Poverty Measure (SPM) was developed following decades of research on poverty measurement. Details regarding the history of the SPM and the current methodology can be found in the SPM technical documentation at [https://www2.census.gov/programs-surveys/supplemental-poverty-measure/datasets/spm/spm\\_techdoc.pdf](https://www2.census.gov/programs-surveys/supplemental-poverty-measure/datasets/spm/spm_techdoc.pdf).

## UPDATES FOR 2023

### Updates to Resources

#### *Tax Model*

SPM estimates for 2023 reflect minor changes to federal, state, and local (for select states) income taxes. Most changes were related to the expiration of state tax credit rebates enacted in 2022. Most expired, but four states extended or added state tax credit rebates in 2023. Additionally, more than 10 states added or expanded their state earned income tax credit, child tax credit, and/or child and dependent care credit programs.

Details on the tax model methodology and more information on changes for 2023 can be found at [www.census.gov/topics/income-poverty/income/guidance/tax-model.html](http://www.census.gov/topics/income-poverty/income/guidance/tax-model.html).

#### *School Lunch Methodology*

The methodology for estimating the value of school lunches provided by the National School Lunch Program varied from

2020 to 2022 to account for the COVID-19 pandemic.<sup>1</sup> With the end of pandemic flexibilities, the methodology for estimating school lunch values has stabilized; the 2023 values were estimated using 2023 reimbursement rates and the same methodology as was used for fall 2022. This methodology accounts for states that provide universal free school lunches and for the Pandemic Electronic Benefit Transfer (P-EBT) program, which ended after summer 2023.<sup>2</sup> In states with universal free lunches, those who reported receiving free or reduced price lunches were assigned the free lunch value for the year.<sup>3</sup> Those who reported paying for lunch were assigned the paid lunch value regardless of whether the state provides universal free lunches. As in previous years, the P-EBT benefits were only included in the school lunch value when respondents reported P-EBT receipt but did not receive Supplemental Nutrition Assistance Program (SNAP) benefits. This is done to avoid double-counting P-EBT benefits.

#### **Updates to Thresholds**

The 2023 poverty thresholds were updated to include broadband subsidies. Otherwise, the construction of the thresholds is unchanged from 2022. Details on the methodology and research on the SPM thresholds are available at <https://stats.bls.gov/pir/spmhome.htm>.

#### **Evaluation and Improvements to the SPM**

In 2020, the U.S. Census Bureau commissioned the National Academies' Committee on National Statistics (CNSTAT) to convene a panel to evaluate the SPM and offer recommendations to improve the measure in the future. The expert panel produced a consensus report in April 2023 that outlined key areas of research for the Census Bureau and the Bureau of Labor Statistics (BLS) to work on in the coming years. The panel's report can be found at <https://nap.nationalacademies.org/catalog/26825/an-updated-measure-of-poverty-redrawing-the-line>.

The Census Bureau conducts ongoing research on improvements and will consider the recommendations of the CNSTAT panel alongside research by external and governmental experts in developing a research agenda and roadmap for improvements to the SPM. In considering any changes that would be made to the SPM, the Census Bureau will continue to work with BLS and the current Interagency Technical Working Group (ITWG) on the SPM, which was established in 2016. The ITWG on the SPM has an established process for making changes to the SPM, with major changes occurring only after a multiyear process of research and public engagement.

---

## Interagency Technical Working Group Statement of Duties

The ITWG on the SPM meets quarterly to review major and minor methodological changes to the SPM. The ITWG ensures that the SPM captures year-to-year changes in governmental policy and discusses potential measurement improvements. The ITWG will continue to advise the Census Bureau and BLS on potential changes and updates to the SPM methodology.

## ENDNOTES

<sup>1</sup> More information on the 2020 methodology can be found at <[www.census.gov/library/working-papers/2021/demo/SEHSD-WP2021-20.html](http://www.census.gov/library/working-papers/2021/demo/SEHSD-WP2021-20.html)>, while the 2021 methodology is at <[www.census.gov/library/working-papers/2022/demo/SEHSD-wp2022-15.html](http://www.census.gov/library/working-papers/2022/demo/SEHSD-wp2022-15.html)>, and the 2022 methodology is at <[www.census.gov/library/working-papers/2023/demo/SEHSD-WP-2023-20.html](http://www.census.gov/library/working-papers/2023/demo/SEHSD-WP-2023-20.html)>.

<sup>2</sup> The 2023 summer P-EBT benefit was \$120 per child.

<sup>3</sup> Six states offered universal free lunches in the 2022–2023 school year: California, Connecticut, Maine, Massachusetts, Nevada, and Vermont. Four additional states—Colorado, Michigan, Minnesota, and New Mexico—began to offer universal free meals in the 2023–2024 school year. The methodology assumes that the four states that offered universal free meals beginning in the 2023–2024 school year had universal free meals for the whole year.

Table B-1.

**Two-Adult, Two-Child Poverty Thresholds: 2022 and 2023**

(In nominal dollars)

Measure	2022	Standard error	2023	Standard error
<b>Official Poverty Measure</b>				
Official poverty measure .....	29,678	N	30,900	N
<b>Research Supplemental Poverty Measure</b>				
Owners with mortgages .....	34,235	307	36,915	316
Owners without mortgages .....	28,909	525	30,870	612
Renters .....	34,518	303	37,482	415

N Not available.

Source: The 2023 Supplemental Poverty Measure (SPM) thresholds were produced by Ryan M. Unitan in the Division of Price and Index Number Research, Bureau of Labor Statistics (BLS). The thresholds and standard errors are based on data from the U.S. Consumer Expenditure Survey (CE) Interview, with all data consumer unit weighted. Standard errors of the thresholds are derived using replicate weights available in the CE Interview data files. Information regarding the estimation of standard errors based on CE replicate weights is available at <[www.bls.gov/cex/pumd-getting-started-guide.htm](http://www.bls.gov/cex/pumd-getting-started-guide.htm)>. Thresholds and standard errors are produced as a BLS research series and are not considered an official production series. Methodological details and related research regarding the SPM thresholds are available at <<https://stats.bls.gov/pir/spmhome.htm>>. The 2023 thresholds and related statistics were finalized as of May 13, 2024, and include the imputed value of broadband subsidy benefits. The thresholds for 2022 were finalized as of May 11, 2023.

Table B-2.

**Number and Percentage of People in Poverty Using the Supplemental Poverty Measure by Age, Race, and Hispanic Origin: 2009 to 2023**

(Populations in thousands. Margins of error in thousands or percentage points as appropriate. Population as of March of the following year. Information on confidentiality protection, sampling error, nonsampling error, and definitions is available at <<https://www2.census.gov/programs-surveys/cps/techdocs/cpsmar24.pdf>>)

Footnotes available on next page.

<sup>1</sup> Since 2003, federal surveys have allowed respondents to report more than one race. Therefore, two basic ways of defining a race group are possible. A group, such as Asian, may be defined as those who reported Asian and no other race (the race-alone or single-race concept) or as those who reported Asian regardless of whether they also reported another race (the race-alone-or-in-combination concept). This table shows data using both approaches. Since Hispanic individuals may be any race, data for the Hispanic population overlap with data for race groups. Of those who reported only one race in the 2024 CPS ASEC, Hispanic origin was reported by 17.1 percent of White householders, 5.8 percent of Black householders, 2.4 percent of Asian householders, and 32.3 percent of American Indian and Alaska Native householders. Data users should exercise caution when interpreting aggregate results for the Hispanic population or for race groups because these populations consist of many distinct groups that differ in socioeconomic characteristics, culture, and nativity. Data on Hispanic origin were first collected in 1972. Data on Asian and Pacific Islander origin and American Indian and Alaska Native origin were first collected in 1987. Estimates for Native Hawaiians and Other Pacific Islanders are not shown separately due to sample size.

<sup>2</sup> A margin of error (MOE) is a measure of an estimate's variability. The larger the MOE in relation to the size of the estimate, the less reliable the estimate. This number, when added to and subtracted from the estimate, forms the 90 percent confidence interval. MOEs shown in this table are based on standard errors calculated using replicate weights.

<sup>3</sup> Implementation of 2020 Census-based population controls.

<sup>4</sup> Estimates reflect the implementation of revised Supplemental Poverty Measure (SPM) methodology. More information is provided in the SPM technical documentation available at [https://www2.census.gov/programs-surveys/supplemental-poverty-measure/datasets/spm/spm\\_techdoc.pdf](https://www2.census.gov/programs-surveys/supplemental-poverty-measure/datasets/spm/spm_techdoc.pdf).

<sup>5</sup> Estimates reflect the implementation of an updated processing system and should be used to make comparisons to 2018 and subsequent years.

<sup>6</sup> The 2014 CPS ASEC included redesigned questions for income and health insurance coverage. All of the approximately 98,000 addresses were eligible to receive the redesigned set of health insurance coverage questions. The redesigned income questions were implemented to a subsample of these 98,000 addresses using a probability split panel design. Approximately 68,000 addresses were eligible to receive a set of income questions similar to those used in the 2013 CPS ASEC and the remaining 30,000 addresses were eligible to receive the redesigned income questions. The source of these 2013 estimates is the portion of the CPS ASEC sample that received the redesigned income questions, approximately 30,000 addresses.

<sup>7</sup> The source of these 2013 estimates is the portion of the CPS ASEC sample that received the income questions consistent with the 2013 CPS ASEC, approximately 68,000 addresses.

<sup>8</sup> Implementation of 2010 Census-based population controls.

Note: Details may not sum to rounding. Estimates may differ from previous publications due to additional rounding implemented to protect respondent privacy.

Table B-3.

### Number and Percentage of People in Poverty Using the Supplemental Poverty Measure: 2022 and 2023—Con.

(Numbers in thousands. Margins of error in thousands or percentage points as appropriate. People as of March of the following year. Information on confidentiality protection, sampling error, nonsampling error, and definitions is available at <<https://www2.census.gov/programs-surveys/cps/techdocs/cpsmar24.pdf>>)

Characteristic	SPM 2022				SPM 2023				Difference (2023 less 2022)	
	Number	Margin of error <sup>1</sup> (±)	Percent	Margin of error <sup>1</sup> (±)	Number	Margin of error <sup>1</sup> (±)	Percent	Margin of error <sup>1</sup> (±)	Number	Percent
<b>Work Experience</b>										
Total, 18 to 64 years old . . . . .	23,730	648	11.9	0.3	24,500	657	12.2	0.3	761	0.4
All workers . . . . .	10,230	389	6.6	0.3	10,940	397	7.0	0.3	*706	*0.4
Worked full-time, year-round . . . . .	4,113	213	3.6	0.2	4,725	229	4.1	0.2	*612	*0.5
Less than full-time, year-round . . . . .	6,121	291	15.1	0.6	6,216	295	14.7	0.7	94	-0.4
Did not work . . . . .	13,500	462	29.9	0.8	13,550	437	31.1	0.8	54	*1.2
<b>Disability Status<sup>5</sup></b>										
Total, 18 to 64 years old . . . . .	23,730	648	11.9	0.3	24,500	657	12.2	0.3	761	0.4
With a disability . . . . .	3,641	202	23.0	1.1	3,763	206	22.8	1.1	122	-0.2
With no disability . . . . .	20,020	588	10.9	0.3	20,660	582	11.3	0.3	648	0.4

Z Rounds to zero.

\* An asterisk preceding an estimate indicates change is statistically different from zero at the 90 percent confidence level.

<sup>1</sup> A margin of error (MOE) is a measure of an estimate's variability. The larger the MOE in relation to the size of the estimate, the less reliable the estimate. This number, when added to and subtracted from the estimate, forms the 90 percent confidence interval. MOEs shown in this table are based on standard errors calculated using replicate weights.

<sup>2</sup> Unrelated individuals are people of any age who are not living with any other family members.

<sup>3</sup> Federal surveys give respondents the option of reporting more than one race. Therefore, two basic ways of defining a race group are possible. A group, such as Asian, may be defined as those who reported Asian and no other race (the race-alone or single-race concept) or as those who reported Asian regardless of whether they also reported another race (the race-alone-or-in-combination concept). This table shows estimates for the race-alone population and the Two or More Races population. The primary use of the single-race population does not imply that it is the preferred method of presenting or analyzing data. The Census Bureau presents data on race in a variety of ways. Estimates for Native Hawaiians and Other Pacific Islanders are not shown separately due to sample size.

<sup>4</sup> Information on metropolitan statistical areas and principal cities is available at <[www.census.gov/programs-surveys/metro-micro/about/glossary.html](http://www.census.gov/programs-surveys/metro-micro/about/glossary.html)>.

<sup>5</sup> The sum of those with and without a disability does not equal the total because disability status is not defined for individuals in the U.S. armed forces.

Note: SPM is the Supplemental Poverty Measure. Details may not sum to totals due to rounding. Estimates may differ from previous publications due to additional rounding implemented to protect respondent privacy.

Table B-4.

**Number and Percentage of People in Poverty by Different Poverty Measures: 2023—Con.**

(Numbers in thousands. Margins of error in thousands or percentage points as appropriate. People as of March of the following year. Information on confidentiality protection, sampling error, nonsampling error, and definitions is available at <<https://www2.census.gov/programs-surveys/cps/techdocs/cpsmar24.pdf>>)

Characteristic	Total	Official*				SPM				Difference (SPM - Official*)	
		Number	Margin of error <sup>1</sup> (±)	Percent	Margin of error <sup>1</sup> (±)	Number	Margin of error <sup>1</sup> (±)	Percent	Margin of error <sup>1</sup> (±)	Number	Percent
<b>Health Insurance Coverage</b>											
With private insurance.....	216,800	8,392	401	3.9	0.2	13,050	473	6.0	0.2	*4,663	*2.2
With public, no private insurance.....	88,440	22,390	682	25.3	0.7	22,740	723	25.7	0.7	347	0.4
Not insured.....	27,150	6,059	350	22.3	1.1	7,048	394	26.0	1.2	*989	*3.6
<b>Work Experience</b>											
Total, 18 to 64 years old.....	200,400	20,000	544	10.0	0.3	24,500	657	12.2	0.3	*4,491	*2.2
All workers.....	156,800	7,054	315	4.5	0.2	10,940	397	7.0	0.3	*3,886	*2.5
Worked full-time, year-round.....	114,400	2,077	156	1.8	0.1	4,725	229	4.1	0.2	*2,648	*2.3
Less than full-time, year-round.....	42,360	4,978	271	11.7	0.6	6,216	295	14.7	0.7	*1,238	*2.9
Did not work.....	43,560	12,950	400	29.7	0.7	13,550	437	31.1	0.8	*605	*1.4
<b>Disability Status<sup>5</sup></b>											
Total, 18 to 64 years old.....	200,400	20,000	544	10.0	0.3	24,500	657	12.2	0.3	*4,491	*2.2
With a disability.....	16,540	3,681	190	22.3	1.0	3,763	206	22.8	1.1	82	0.5
With no disability.....	182,900	16,270	472	8.9	0.3	20,660	582	11.3	0.3	*4,393	*2.4

\* An asterisk preceding an estimate indicates change is statistically different from zero at the 90 percent confidence level.

<sup>1</sup> A margin of error (MOE) is a measure of an estimate's variability. The larger the MOE in relation to the size of the estimate, the less reliable the estimate. This number, when added to and subtracted from the estimate, forms the 90 percent confidence interval. MOEs shown in this table are based on standard errors calculated using replicate weights.

<sup>2</sup> Unrelated individuals are people of any age who are not living with any other family members.

<sup>3</sup> Federal surveys give respondents the option of reporting more than one race. Therefore, two basic ways of defining a race group are possible. A group, such as Asian, may be defined as those who reported Asian and no other race (the race-alone or single-race concept) or as those who reported Asian regardless of whether they also reported another race (the race-alone-or-in-combination concept). This table shows estimates for the race-alone population and the Two or More Races population. The primary use of the single-race population does not imply that it is the preferred method of presenting or analyzing data. The Census Bureau presents data on race in a variety of ways. Estimates for Native Hawaiians and Other Pacific Islanders are not shown separately due to sample size.

<sup>4</sup> Information on metropolitan statistical areas and principal cities is available at <[www.census.gov/programs-surveys/metro-micro/about/glossary.html](http://www.census.gov/programs-surveys/metro-micro/about/glossary.html)>.

<sup>5</sup> The sum of those with and without a disability does not equal the total because disability status is not defined for individuals in the U.S. armed forces.

Note: Official\* includes unrelated individuals under the age of 15. SPM is the Supplemental Poverty Measure. Details may not sum to totals due to rounding.

Z Rounds to zero.

<sup>1</sup> A margin of error (MOE) is a measure of an estimate's variability. The larger the MOE in relation to the size of the estimate, the less reliable the estimate. This number, when added to and subtracted from the estimate, forms the 90 percent confidence interval. MOEs shown in this table are based on standard errors calculated using replicate weights.

<sup>2</sup> Refundable tax credits include the Earned Income Tax Credit (EITC) and the refundable portion of the Child Tax Credit.

<sup>3</sup> SNAP is the Supplemental Nutrition Assistance Program; SSI is Supplemental Security Income; TANF is Temporary Assistance for Needy Families; WIC is the Special Supplemental Nutrition Program for Women, Infants, and Children; FICA is the Federal Insurance Contributions Act.

<sup>4</sup> Utility assistance includes the Affordable Connectivity Program and other noncash energy benefits.

Note: Details may not sum to totals due to rounding. Estimates may differ from previous publications due to additional rounding implemented to protect respondent privacy.

---

## Appendix C. Additional Information

### SOURCE AND ACCURACY OF THE ESTIMATES

The Current Population Survey (CPS) is the longest-running survey conducted by the U.S. Census Bureau. The CPS is a household survey primarily used to collect employment data. The sample universe for the basic CPS consists of the resident civilian noninstitutionalized population of the United States. People in institutions, such as prisons, long-term care hospitals, and nursing homes, are not eligible to be interviewed in the CPS. Students living in dormitories are included in the estimates only if information about them is reported in an interview at their parents' home. Since the CPS is a household survey, people who are homeless and not living in shelters are not included in the sample.

The CPS Annual Social and Economic Supplement (CPS ASEC), the source for the estimates in this report, collects data in February, March, and April each year, asking detailed questions categorizing income into over 50 sources. The key purpose of the survey is to provide timely and comprehensive estimates of income, poverty, and health insurance and to measure change in these national-level estimates. The survey is the official source of national poverty estimates calculated in accordance with the Office of Management and Budget's Statistical Policy Directive 14 (Appendix A).

The CPS ASEC collects data in the 50 states and the District of Columbia; these data do not

represent residents of Puerto Rico or the U.S. Island Areas.<sup>1</sup> The 2024 CPS ASEC sample consists of about 89,500 addresses. The CPS ASEC includes military personnel who live in a household with at least one civilian adult, regardless of whether they live on- or off-post. All other armed forces personnel are excluded. The estimates in this report are controlled to March 2024 independent national population estimates by age, sex, race, and Hispanic origin. Beginning with the data for 2020, population estimates are based on 2020 Census population counts and are updated annually after accounting for births, deaths, emigration, and immigration.

The estimates in this report (which may be shown in text, figures, and tables) are based on responses from a sample of the population and may differ from actual values because of sampling variability or other factors. As a result, apparent differences between the estimates for two or more groups may not be statistically significant. All comparative statements have undergone statistical testing and are statistically significant at the 90 percent confidence level unless otherwise noted.

In this report, the variances of estimates were calculated using replication methods. For estimates prior to 2010, or as noted in historical tables, the Generalized Variance Function (GVF) method was used. More information on replicate weights, standard errors, income top-coding and data swapping on the public-use file,

and changes to the CPS ASEC data file from the prior year is available at <<https://www2.census.gov/programs-surveys/cps/techdocs/cpsmar24.pdf>>.

### Nonresponse Bias in the CPS ASEC

The Census Bureau administers the CPS ASEC each year between February and April by telephone and in-person interviews, with most data collected in March. In 2020, normal data collection was interrupted due to the COVID-19 pandemic. The response rate fell to 73 percent in March 2020, down from 82 percent in March 2019. Response rates were regularly above 80 percent before the pandemic.

Although standard collection procedures have resumed, response rates remain lower than they were before the pandemic. The response rate for the CPS basic household survey was 67 percent in March 2024. Lower response rates could affect estimates if respondents differ from nonrespondents. More information on how sample differences and nonresponse bias affected income and poverty estimates in the 2024 CPS ASEC is available at <[www.census.gov/newsroom/blogs/research-matters/2024/09/administrative-data-nonresponse-bias-cps-asec.html](http://www.census.gov/newsroom/blogs/research-matters/2024/09/administrative-data-nonresponse-bias-cps-asec.html)>. Information on how data collection issues in 2020 affected health insurance coverage estimates is available at <[www.census.gov/library/working-papers/2020/demo/SEHSD-WP2020-13.html](http://www.census.gov/library/working-papers/2020/demo/SEHSD-WP2020-13.html)>.

## CPS ASEC Modernization

The Census Bureau has begun a multiyear effort to modernize many of its surveys, including the CPS. Part of this involves adding an Internet Self-Response (ISR) mode to the CPS and then the CPS ASEC.

This project requires extensive review and testing to ensure that ISR is a viable collection mode for the CPS ASEC and that changes do not negatively affect the reliability and comparability of the estimates. The project schedule seeks to align the CPS ASEC modernization effort with that of the CPS to maintain continuity. However, the schedule and activities may change to accommodate funding availability, discovery of issues during testing and analysis, and project reprioritization.

For more information about the ASEC modernization project and timeline, visit the Census Bureau's CPS ASEC Modernization Efforts webpage at <[www.census.gov/programs-surveys/cps/about/modernization/asecmodernization.html](http://www.census.gov/programs-surveys/cps/about/modernization/asecmodernization.html)> or email <[demo.asec.modernization@census.gov](mailto:demo.asec.modernization@census.gov)>.

## National Experimental Well-Being Statistics (NEWS) Project

The NEWS project is an experimental effort to develop improved estimates of income, poverty, and other measures of economic well-being by using all available survey, administrative, and commercial data.

The first NEWS release in February 2023 included a working paper that provided improved estimates of income and official poverty statistics for 2018. It simultaneously addressed

### Business Cycles—Recessions

Peak month	Year	Trough month	Year
November	1948	October	1949
July	1953	May	1954
August	1957	April	1958
April	1960	February	1961
December	1969	November	1970
November	1973	March	1975
January	1980	July	1980
July	1981	November	1982
July	1990	March	1991
March	2001	November	2001
December	2007	June	2009
February	2020	April	2020

Source: National Bureau of Economic Research, <[www.nber.org/research/data/us-business-cycle-expansions-and-contractions](http://www.nber.org/research/data/us-business-cycle-expansions-and-contractions)>.

three possible sources of bias documented in prior research by improving weights to correct for unit nonresponse, improving imputation to correct for missing information in survey and administrative data, and combining or replacing survey responses with administrative data to correct for misreporting.

Reducing survey error using these techniques substantially affected key measures of well-being. Using these experimental methods, median household income was estimated to be 6.3 percent higher than in survey estimates, while the official poverty rate was 1.1 percentage points lower. These differences were driven by subpopulations that were disproportionately affected by survey error, like householders 65 years and older. For this group, median household income was 27.3 percent higher than in survey estimates, while the official poverty rate was 3.3 percentage points lower.

The NEWS project plans to release additional years of statistics, produce more timely estimates, and measure additional income concepts.

## BUSINESS CYCLES—RECESSIONS

Business cycle peaks and troughs used to delineate the beginning and end of recessions, as shown in the text box “Business Cycles—Recessions,” are determined by the National Bureau of Economic Research (NBER), a private research organization. The data points in the time-series figures in this report use July as a reference. According to the NBER chronology, the most recent peak occurred in February 2020. The most recent trough occurred in April 2020. More information on business cycle dating is available at <[www.nber.org/research/business-cycle-dating](http://www.nber.org/research/business-cycle-dating)>.

---

## ACCESSING POVERTY DATA

### Additional CPS ASEC Estimates

Additional estimates from the CPS ASEC are available on the Census Bureau's poverty websites. This includes detailed and historical tables, press releases, briefings, and working papers. The websites may be accessed through the Census Bureau's homepage at [www.census.gov](http://www.census.gov) or directly at [www.census.gov/topics/income-poverty/poverty.html](http://www.census.gov/topics/income-poverty/poverty.html) and [www.census.gov/topics/income-poverty/supplemental-poverty-measure.html](http://www.census.gov/topics/income-poverty/supplemental-poverty-measure.html).

### Public-Use Microdata

Public-use CPS ASEC microdata is available for data users of all skill levels.

Data users can create custom statistics from public-use microdata files using the Microdata Access Tool (MDAT) available at <https://data.census.gov/mdat>.

Microdata for the 2024 CPS ASEC and earlier years are available online at [www.census.gov/data/datasets/time-series/demo/cps/cps-asec.html](http://www.census.gov/data/datasets/time-series/demo/cps/cps-asec.html). Technical methods have been applied to CPS microdata to avoid disclosing respondents' identities.

The Census Data Application Programming Interface (API) gives the public access to raw statistical data from various Census Bureau data programs. It is an efficient way to query data directly from Census Bureau servers. The historical poverty data found in Table HSTPOV2 are available in the API at [www.census.gov/data/developers/data-sets/Poverty-Statistics.html](http://www.census.gov/data/developers/data-sets/Poverty-Statistics.html).<sup>2</sup> The table is also available at <https://data.census.gov/>.

### Disclosure Avoidance for the CPS ASEC Public Use Microdata

Starting in January 2023, the monthly CPS began implementing changes to provide additional confidentiality protection to the data. As part of these changes, geographies with populations between 100,000 and 249,000 are partially synthesized for privacy protection. Refer to <https://www2.census.gov/programs-surveys/cps/methodology/improving-disclosure-avoidance-puf-v2.pdf> for more details. This synthesis only affects the public use file. More information on the effect of these changes on SPM estimates generated from the public-use file can be found at [www.census.gov/library/working-papers/2023/demo/SEHSD-WP2023-25.html](http://www.census.gov/library/working-papers/2023/demo/SEHSD-WP2023-25.html).

## OTHER SOURCES OF POVERTY DATA

The Census Bureau recommends that people use the CPS ASEC for timely and thorough estimates of national poverty. However, the Census Bureau produces other data that are appropriate for subnational areas and longitudinal analysis. The American Community Survey (ACS) and the Small Area Income and Poverty Estimates (SAIPE) program can be used for subnational poverty estimates, while the Survey of Income and Program Participation (SIPP) provides monthly and longitudinal estimates.

### American Community Survey

The ACS is an ongoing survey that collects comprehensive information on social, economic, and housing topics. Due to its large sample size, the ACS provides estimates at many levels

of geography and for smaller population groups.

The Census Bureau presents annual estimates of poverty by state and other smaller geographic units based on data collected in the ACS. Single-year estimates from the ACS are available for geographic units with populations of 65,000 or more. Estimates of income and poverty for all geographic units, including census tracts and block groups, are available by pooling 5 years of ACS data. Poverty estimates from the ACS are available at <https://data.census.gov/>.

### Small Area Income and Poverty Estimates

The SAIPE program uses statistical models to produce estimates of median household income and poverty for states and all counties, as well as population and poverty estimates for school districts.

Statistics from the SAIPE program are used by the U.S. Department of Education to allocate funding under Title 1 of the Elementary and Secondary Education Act. SAIPE methodology combines data from a variety of sources, including administrative records, population estimates, the decennial census, and the ACS to provide consistent and reliable single-year estimates for all counties and school districts, regardless of size, each year. In general, SAIPE estimates have lower variances than ACS estimates but offer fewer demographic details than the ACS. Estimates from this program are available at [www.census.gov/programs-surveys/saipe.html](http://www.census.gov/programs-surveys/saipe.html).

---

## Survey of Income and Program Participation

The SIPP provides both monthly and longitudinal data about labor force participation and income sources and amounts at the individual, family, and household levels by following the same respondents over time. Whereas the CPS ASEC provides reliable estimates of the net change from one year to the next in the overall distribution of economic characteristics for the whole population, it cannot show how these characteristics change for the same person, family, or household. By collecting monthly data for the same respondents over multiple years, the SIPP makes it possible to observe how economic characteristics

change at the individual level. This yields insights into the dynamic nature of these experiences, as well as the economic mobility of U.S. residents. Estimates from these data are available in table packages, working papers, and the Census Bureau's P70 series reports, all available at <[www.census.gov/programs-surveys/sipp/library/publications.html](http://www.census.gov/programs-surveys/sipp/library/publications.html)>.

## QUESTIONS AND COMMENTS

For questions and assistance with poverty data, contact the U.S. Census Bureau Customer Service Center at 1-800-923-8282 (toll-free) or search your topic of interest using the Census Bureau's "Question and Answer Center" found at <<https://ask.census.gov/>>.

The Census Bureau also welcomes the comments and advice of data and report users. If you have suggestions or comments on this report, please write to:

Liana E. Fox

Assistant Division Chief for Economic Characteristics Social, Economic, and Housing Statistics Division

U.S. Census Bureau

Washington, DC 20233-8500

Or email <[liana.e.fox@census.gov](mailto:liana.e.fox@census.gov)>.

## ENDNOTES

<sup>1</sup> U.S. Island Areas include American Samoa, Guam, the Commonwealth of the Northern Mariana Islands, and the U.S. Virgin Islands.

<sup>2</sup> An Excel version of HSTPOV2 can be found at <<https://www2.census.gov/programs-surveys/cps/tables/time-series/historical-poverty-people/hstpov2.xlsx>>.
